Vostok installation guidelines

These guidelines work fantastic for Limini Blend.

General settings

- Boiler temperature: 128 C
- Brew boiler temperature: 94 C
- Group temperatures: 93 C each

Group settings

- AUTO, PRESSURE
- Short shot: 17g in, 25g out in 27 sec (about 7.5 to 8.2 BAR)
- Long shot: 16g in, 32g out in 27 sec (about 7 BAR)

Pre-infusion pressure

- The pre-infusion MUST be set higher than the incoming water pressure.
We recommend 6 bars.

Weekly timer

- Please ask the customer if they would like this turned on. See manual for instructions.

Backflushing

The Vostok, with the dosing system installed, can be backflushed. Unlike a pump machine, backflushing the Vostok is hardly necessary (especially with the safety system installed). We recommend a daily backflush to clean the shower screens.

User manual can be found here:
